

SQL 11: TRANSACTIONS -2

27/05/24

AGENDA

Isolation Levels

- ① Read Uncommitted
- ② Read Committed
- ③ Repeatable Read
- ④ Serializable

Problems

Dirty Read
Non-Repeatable Read
Phantom Read
Deadlock.

DB locks

- ① Shared (S) - Multiple Transactions can read a row.
- ② Exclusive (X) - Transactions can "update" or "delete" a row.

T1

Begin;

Exclusive lock.
Update where id=1.

Commit;

T2

Begin

X update where id=1;

Commit;

READ COMMITTED

- ① Transactions will read last committed data.
- ② Dirty Reads will not happen.

Query

Table: students

srd	sname	PSP	email-sent
1	A	60	False True
2	B	75	False True.
3	C	70	False True
4	D	45	False True
5	E	90	False.

$RU \rightarrow RC \rightarrow RR \rightarrow S$

Send email to all students with $PSP < 80\%$.

- ① List <Students> = SELECT * from STUDENTS WHERE $PSP < 80$;
- ② Send Emails (A, C, D)
- ③ Update "email-sent" field to "True".

Update students
SET email-sent = True
WHERE $PSP < 80$;

D - True

Non-Repeatable Read.

REPEATABLE READ

Performance poor \rightarrow because it takes a snapshot at the beginning of transaction and uses that as reference during the transaction.

Phantom → (ghost)

BREAK TILL - 8:23 AM.

PHANTOM READ

Read something that does not exist.

Isolation Level :- RR.

T1 (RR)

T2

① Begin;

① Begin

② Read the last "xyz"
row;
- - -
- - -
- - -

② Insert 1 row;

③ Commit;

③ Read the last row.

④ Commit;

SERIALIZABLE

→ Transactions executed in a particular order.
serially, even though they occurred in parallel.

SELECT . . .

"S"

Deadlock:

T1

T2 .

Select * film_id is (12) Select * film_id is (23)

S 1
S 2

S 2
S 3

update id=2

update = 2 .

S id=2
(T1)

S id=2
(T2)

X

X

Ignore DB

Serializable .

T1

Serializable

T2

Insert(' ');

Performance goes down ↓
Consistency goes up ↑

Summary

Read	Transaction Level Data
RU RC	No need to maintain any version of data. Maintain a version of all committed data. — till the current stmt in transaction.
RR	Maintain a history (Snapshot till the start of transaction).
S	Acquire a shared lock for read also.

Queries run in class -

```
